SKILLS

Languages: C, C++, Java, python

Tools/Platforms: Amazon Web Services (AWS), Neo colab, My SQL, Git/GitHub, VMware

Soft Skills: Problem-Solving, Team Player, Fast learner, Adaptability

SUMMER TRAINING

Lovely professional University | [Certificate](#)

Jun' 25-Jul' 25

CPP Programming using OOPS

- Project Overview: Developed a Bank Management System to manage customer accounts and transactions efficiently.
- Implemented features for account creation, deposit, withdrawal, and balance inquiry.
- Focused on data handling, validation, and menu-driven operations for user interaction.
- Outcome: Streamlined banking operations through a structured and efficient C++ program simulating real world functionalities.
- Tech Used: C++

PROJECTS

Bank Management System | c++ | [LINK](#)

Jun' 25

- The project uses classes, file handling, and a menu-driven interface to manage essential banking operations
- Such as creating accounts, depositing, withdrawing, displaying, modifying, and deleting records.
- Developed a file-based system using object-oriented programming to efficiently handle and store customer account information
- Implemented a structured Bank Management System with a text-based interface, allowing users to perform core banking tasks — simulating the operations of a virtual bank ledger.

Intelligent CPU Scheduler Simulator | HTML, CSS, JavaScript | [LINK](#)

Apr '25

- Preprocess a CPU Scheduler Simulator to offer an interactive and visual approach to mastering key scheduling algorithms, enhancing understanding through direct experimentation.
- Simulate and visualize key scheduling algorithms like FCFS, SJF, Round Robin, and Priority Scheduling using this innovative interactive tool.
- Created a responsive website using HTML for layout, CSS for visual design, and JavaScript for dynamic and backend features.

Data saving services | amazon aws

Mar' 25

- Created and launched a secure, scalable file-upload system using AWS Lambda and Amazon S3 entirely within the AWS Student Sandbox, without outside dependencies or custom IAM policies
- Used Amazon S3 for reliable data storage, AWS Lambda to generate pre-signed upload URLs, and AWS CloudShell for secure file transfers with cURL.
- Developed a fully AWS-native, lightweight upload workflow that improves data storage and retrieval, ensuring strong compatibility and security within the sandbox environment.
